Assessment Site.jpg;

Hi Honest,

As discussed please see below for details of the task.

1. Create a fully functional one page website based on the attached image.
2. The design of the website should be entirely based on the attached image i.e. all aspects of the image should be replicated as closely as possible in your design.
3. Each navigation menu item should link to a section on the page i.e. when the menu item is clicked, the page should smoothly scroll to the relevant section.
4. There should be a backend that allows for the management of the website. The admin should be able to change the content, i.e. images and text, of each section. No user role definition is necessary, just the one admin account will do.
5. The website is to be entirely built using the Laravel PHP framework and a combination of HTML, CSS, Bootstrap, jQuery and Javascript.
6. Feel free to use any suitable pre-built template for the **backend** interface.
7. While a copy of the attached template is available online, your submission should be **entirely your own**. No code can be copied, extracted and/or otherwise taken from the online version of this or any other template.
8. Once complete submit your task either as a zip file on email or using any VCS platform of your choice.
9. **NB:** Please remember to include either seed files or an sql copy of your database.
10. This task should be submitted no later than end of day on **Wednesday 02 March 2022**
